

ECON 5033 Econometrics I

NATIONAL TSING HUA UNIVERSITY

Fall 2010

Instructor: Eric S. Lin

Contact Information: Office: CTM-712, E-mail: slin@mx.nthu.edu.tw, Tel: 574-2729

Time and Location: Monday 9:00-12:00, CTM-203

Office Hours: Monday 1:00-2:00 PM or by appointment

Course Webpage: iLMS – <http://lms.nthu.edu.tw/>

Teaching Assistant: Yu-Lung Lue, E-mail: d948901@oz.nthu.edu.tw

Teaching Assistant Hours: Tuesday 10:00-12:00 or by appointment

Course Description:

This course is designed for first-year Economics graduate students. The basic methods, modern econometric methods and theory are covered. The intention is that the material will provide a foundation for applied research in economics. It will provide an initial opportunity for you to develop the skills to conduct and understand empirical work. The coursework will be theoretical in nature, but students will also be required to use the methods to estimate certain models and test certain hypotheses.

Prerequisites:

Basic calculus, familiarity with probability, statistics, and matrix algebra will be assumed.

Textbook:

Basically, I will hand out weekly lecture notes which are the summary of literature and textbooks.

- My Lecture Notes.
- [JD] Johnston and DiNardo, 1997, *Econometric Methods*, 4th edition, McGraw Hill.
- [G] Greene, W. H., 2008, *Econometric Analysis*, 6th edition, Prentice Hall.

References:

Note that you don't need to buy the following references. If you are not comfortable with basic concepts of econometrics, it would be helpful to consult to above textbooks and the following references anytime.

- [W] Wooldridge, J. M., 2000, *Introductory Econometrics: A modern approach*, South-Western.
- [K] Kennedy, P. A., 1998, *A guide to Econometrics*, 4th edition, MIT Press.
- [DS] DeGroot M. H. and M. J. Schervish, 2002, *Probability and Statistics*, 3rd edition, Addison Wesley.
- [CB] Casella, G. and R. L. Berger, 2001, *Statistical Inference*, 2nd edition, Duxbury.
- [R] Ruud, P. A., 2000, *An Introduction to Classical Econometric Theory*, Oxford.
- [DM] Davidson, R. and J. D. MacKinnon, 2004, *Econometric Theory and Methods*, Oxford.

Software: You are welcome to use any econometric or statistic softwares such as *Matlab*, *TSP*, *Gauss*, *Stata*, *Eviews*, or *Limdep*.

Grading: There will be weekly assignments¹, two midterm exams and a final. Note that overdue assignment will **NOT** be accepted. They will count toward the final grade as follows.²

Assignments	15%
Midterm I	25%
Midterm II	25%
Final	35%.

¹Class assignments will be passed out approximately every week. These assignments will include both problem solving and computer tasks.

²Bonus will be awarded for the typo corrections.

Course Organization: 17 weeks / lectures [Tentative!!]

1. Sept. 13: Organization
2. Sept. 20: Statistical review and Large sample theory
3. Sept. 27: Multiple regression model [I]
4. Oct. 4: Multiple regression model [II]
5. Oct. 11: Multiple regression model [III]
6. **Oct. 18: Midterm Exam I [In class]**
7. Oct. 25: Guest Speaker
8. Nov. 1: Generalized least square
9. Nov. 8: Instrumental variable
10. Nov. 15: Autocorrelation
11. Nov. 22: Heteroskedasticity
12. **Nov. 29: Midterm Exam II [In class]**
13. Dec. 6: Numerical Optimization
14. Dec. 13: Discrete choice model
15. Dec. 20: Sample selection model
16. Dec. 27: Panel data
17. **Jan. 3: Final Exam**
