IPT5110 Nonlinear Optics Spring, 2020

國立清華大學 光電光程研究所/電機工程學系

Prof. 黃衍介

class schedule: T7T8T9 (starting 15:30 pm, every Tuesday)

Class location: 台達 Delta 212

Teaching Assistants: 楊力源 a0987164252@gmail.com, Tel: x 62333

一、課程說明

The scope of this course covers most nonlinear optical phenomena associated with the 2nd and 3rd order optical nonlinearities. Near the end of the semester, high harmonic generation and plasma nonlinearity in the relativistic regime will also be introduced. To assist learning, this course begins with some review on the linear electromagnetic theory and then gradually moves into the nonlinear regime. This approach is to accommodate more and more undergraduate students taking this course.

Student's participation plays a key role in this course. All students are required to give a few presentations to earn their grades during the whole semester.

四、教學方式

Homework assignment

Doing homework is a team work in this course.

- (1) Each 2-3 students form a study group. **Your group members could be different every week. We will draw lottery to determine your group members after every Monday class.**
- (2) Each week, members in a study group are required to work together on a set of ~30 slides, approximately 1 slide for 1 page of the course reader.
- (3) Each student is then responsible for working out ~10 slides. For the ~10 slides, design 5 questions relevant to the content of the slide. Answer 10 questions not designed by you on a separate page (QA sheet) and email it to the TA and Prof. Huang before the class. Mark your name on the slides prepared by you.
- (4) Before the class, all students have to email their slides and QA sheet in the pdf format to the teaching assistants and Prof. Huang. The file size can't exceed 1 Mb. Provide necessary information on the filename, such as QA_1_your_name.pdf and slide_1_your_name.pdf for the first submission.
- (5) Each student has to bring a memory stick to the class and get ready for a presentation.
- (6) My slides are available on the course website for your reference only. Design your own slides. **Don't copy my slides directly into your homework. In case your group member(s) can't provide you the slides or can't provide you the slides on time for your presentation, you can use my slides or the other group's slides for your presentation. You simply have to study the course materials well before the class.**

Presentation

In each class, I **randomly** draw 3-4 students, each giving half an hour presentation **and hosting a Q&A session** by using approximately 10 slides. *Note that you could have to use the other member's slides in your group for your presentation. This means you do have to work together with your team members on ALL the slides.* A presenter's performance will be graded by both the professor and the fellow students in the audience. **Each student is expected to give >10 presentations in a semester.**

Exams

There will be some quiz, a mid-term exam, and a final exam. All exams are open books/notes. Details of the exams will be announced later.
