一、課程說明	This course is designed for junior and senior students who have finished their introductory courses, such as Life Science I & II (LS1101, LS1102). The lectures can be divided into five parts: I. Introduction, II. Mechanisms of Evolutionary Changes, III. Adaptation, IV. The History of Life. The goals of this course are to cover general principles of evolutionary biology and to help students learn how to think like an evolutionary biologist. Passing of this course is required for taking advanced courses in evolution, such as <i>Molecular Evolution</i> , etc. Lecturer: Dr. Chen Siang Ng (http://gcsng15.wix.com/nglab) Dr. Tsung-Han Kuo (https://sites.google.com/site/behaiorlab/home)
二、指定用書	Evolutionary Analysis, 5th Edition by Scott Freeman and Jon C. Herron (2014, Pearson)

六、成績考核	One take-home midterm (30%) and a final examination (35%) will cover all our lectures during the semester. Students need to read a couple of research papers for both exams and are also required to write a mini-review (3~5 pages) on a topic in evolutionary biology (20%). You're required to ask a question after every class on eeclass (15%). The deadline of the review is January 4, 2022 . Your final grade will be based on the exams, your review paper and your participation in the discussion section, and you will be told your approximate grade standing after the final exam, based on your running average scores.
